

Process Flow and User Interaction Design

Project Design Phase | Import Data Using Transform Maps

1. Process Flow Diagram

2. Process Steps

Step	Activity	Performed by	Output
1	Prepare and check source file	Data owner / admin	Clean CSV or XLSX
2	Create Data Source	Admin	Data source record
3	Load data into import set	Admin	Staging rows
4	Create Transform Map	Admin	Map record
5	Define field maps and coalesce	Admin	Mapped fields, unique key
6	Add scripts and lookups	Developer	Cleaning and validation logic
7	Run transform	Admin	Inserted / updated / ignored rows
8	Review Transform History	Admin	Verified result

3. User Interaction Design (ServiceNow navigation)

Task	Navigation path	Key action
Load data	System Import Sets > Load Data	Choose file, create table, Submit

Task	Navigation path	Key action
Create map	Import Set row > Loaders / Create Transform Map	Set target table, save
Map fields	Transform Map > Field Maps related list	Auto Map / Map Assist
Run	Import Set > Transform / Run Transform	Select map, Transform
Check results	System Import Sets > Transform History	Review counts and errors

4. Exception Paths

Situation	Handling
Row has no valid key	Ignored and logged
Existing record matched	Updated; no duplicate created
Result is wrong	Fix map or file, test on small file, run again
File layout changed	Update the data source and field maps
