

Testing Results and Defect Log

Project Development Phase | Import Data Using Transform Maps

1. Objective

Record the execution of the test cases defined in the Planning phase and log the defects found and fixed during development.

Results are sample outcomes for the sample files. Update the Actual and Status columns with your real results.

2. Test Execution Results

ID	Test case	Expected	Actual (sample)	Status
TC-01	Load valid file and transform	10 inserted	10 inserted	Pass
TC-02	Compare target with source	All values match	All matched	Pass
TC-03	Load duplicate file	0 inserted, 10 updated	0 inserted, 10 updated	Pass
TC-04	Row with blank email	Row ignored, logged	Ignored, warning logged	Pass
TC-05	Unknown department	Saved with blank dept, warning	Saved, warning logged	Pass
TC-06	Status Active / Inactive	true / false	true / false	Pass
TC-07	Auto map matching fields	Matching fields mapped	Mapped	Pass
TC-08	Transform history counts	Counts shown	Counts shown	Pass
TC-09	Import log for rejected rows	Reason shown	Reason shown	Pass
TC-10	Large file (5,000 rows)	No timeout	Completed	Pass
TC-11	Run import without role	Access denied	Access denied	Pass
TC-12	Reuse map for second file	Loads unchanged	Loaded unchanged	Pass

3. Summary

Total	Passed	Failed	Pass rate
12	12	0	100%

4. Defect Log (issues found while building and fixed)

ID	Description	Cause	Fix	Status
D-01	Second load created a duplicate user	Email case differed (Anita@ vs anita@)	Trim and lower-case email in onBefore	Fixed
D-02	All users became inactive	Status had trailing space	Trim status in field map script	Fixed
D-03	Manager field empty	Reference matched on name, not email	Set reference value field name to email	Fixed

ID	Description	Cause	Fix	Status
D-04	Rows rejected for missing name	Blank last name in source	Added name validation and log message	Fixed
D-05	Fields named field1, field2	Header row set incorrectly	Header row = 1, reloaded	Fixed

5. Retest After Fixes

- TC-03 re-run after D-01: no duplicates.
- TC-06 re-run after D-02: statuses correct.
- TC-01 and TC-02 re-run after D-03: managers linked correctly.

6. Requirement Coverage

Requirement group	Covered by	Result
FR-01 to FR-04 (load and map)	TC-01, TC-02, TC-07	Met
FR-06 (coalesce)	TC-03	Met
FR-07 to FR-09 (scripts, references)	TC-04, TC-05, TC-06	Met
FR-11, FR-12 (history, logs)	TC-08, TC-09	Met
NFR-03, NFR-04 (performance, security)	TC-10, TC-11	Met
FR-13 (reuse)	TC-12	Met

7. Conclusion

The import solution meets the planned requirements: data is loaded accurately, duplicates are prevented, invalid rows are skipped and logged, and every run is traceable. The build is ready for documentation and final review.
