

User Guide

Project Documentation | Import Data Using Transform Maps

1. Who This Guide Is For

Administrators and developers who need to import a file into a ServiceNow table using a Transform Map. You need the admin or import_transformer role.

2. Before You Start

- Use the standard file template with the correct header names.
- Remove blank rows and check the Email column is filled for every user.
- Make sure referenced departments already exist in ServiceNow.
- Test in a sub-production instance first.

3. Importing a File (first time)

Step	What to do
1	Go to System Import Sets > Load Data .
2	Select Create table , enter label 'Import Users'.
3	Source: File . Choose the file type (Excel or CSV) and attach the file.
4	Enter Sheet number 1 and Header row 1. Click Submit .
5	Check the loaded rows in the u_import_users list.
6	Click Create Transform Map , set target table to User [sys_user].
7	Use Auto Map Matching Fields , then map remaining fields in Mapping Assist.
8	Tick Coalesce on the email field map.
9	Add the onBefore and status scripts from the Technical Documentation.
10	Open the import set and click Transform ; choose Import Users Map.
11	Review Transform History for inserted, updated, ignored and error counts.

4. Importing Again (next file)

Step	What to do
1	Load the new file with Load Data, choosing the existing table u_import_users.
2	Click Transform and choose the existing Import Users Map.
3	Check Transform History. Existing users are updated, new users are added.

5. Reading the Results

Result	Meaning	What to do
Inserted	New record created	Spot-check a few records

Result	Meaning	What to do
Updated	Existing record matched by email and updated	Confirm the values changed as expected
Ignored	Row skipped by script (missing data)	Fix the source row and load again
Error	Row failed in processing	Open the import log and read the message

6. Do and Don't

Do	Don't
Test with a small file first	Run a first import directly in production
Keep headers exactly the same	Rename or reorder headers without updating the map
Review Transform History every time	Assume all rows loaded
Keep emails unique and lower case	Leave the email column blank

7. File Template

First Name	Last Name	Email	Department	Manager	Title	Phone	Status
