

Technical Documentation

Project Documentation | Import Data Using Transform Maps

1. Components

Component	Name	Description
Import set table	u_import_users	Staging table; all fields are strings
Data source	Import Users file source	Excel / CSV; sheet 1, header row 1
Transform Map	Import Users Map	Source u_import_users, target sys_user
Coalesce field	email	Used to match existing users
Update set	Import Users Transform Map	Holds all configuration

2. Transform Map Settings

Setting	Value
Run business rules	False
Enforce mandatory fields	All
Copy empty fields	False
Active	True
Order	100

3. Field Map Reference

Source	Target	Coalesce	Notes
u_first_name	first_name	No	Direct
u_last_name	last_name	No	Direct
u_email	email	Yes	Direct
u_department	department	No	Reference value field: name
u_manager	manager	No	Reference value field: email
u_title	title	No	Direct
u_phone	phone	No	Direct
u_status	active	No	Source script

4. Script Reference

onBefore validates and cleans each row:

```

var email = source.u_email.toString().trim().toLowerCase();
if (email == '') {
    ignore = true;
    log.warn('Row skipped: missing email');
} else if (source.u_first_name.nil() || source.u_last_name.nil()) {
    ignore = true;
    log.warn('Row skipped: missing name for ' + email);
} else {
    source.u_email = email;
}

```

Field map script for u_status to active:

```

answer = (source.u_status.toString().trim().toLowerCase() == 'active');

```

onAfter logs the result of each row:

```

var action = (isUpdate) ? 'Updated' : 'Inserted';
log.info(action + ' user: ' + target.email);

```

5. Processing Order

Order	Stage
1	onStart
2	Coalesce match
3	onBefore
4	Field maps
5	Insert / update
6	onAfter
7	onComplete

6. Security

Item	Setting
Roles to import	admin, import_transformer
Script editing	Admins only; tracked in update set
Personal data	Source files handled per policy and removed after import

7. Migration Between Instances

- Complete the update set and mark it Complete.
- Export it as XML or use Retrieve from a connected instance.
- Preview and commit in the target instance, resolving any conflicts.
- Create reference data (departments) before the first import there.

8. Maintenance

- If the file layout changes, update the data source and field maps.
- Review scripts when ServiceNow is upgraded.

- Keep a mapping sheet current with the map.
