

Demo Script and Presentation Outline

Project Documentation | Import Data Using Transform Maps

1. Demo Overview

Item	Detail
Title	Import Data Using Transform Maps in ServiceNow
Length	10 to 12 minutes
Audience	Reviewers, mentors, classmates
Prepare	PDI open, files ready, sys_user list filtered, Transform History visible

2. Presentation Outline (slides)

Slide	Title	Key points
1	Title	Project name, team, date
2	Problem	Manual import causes duplicates, errors, no audit trail
3	Objectives	Accurate, duplicate-free, auditable, reusable import
4	Solution	Data source, import set, Transform Map, coalesce
5	Architecture	Source file to staging to transform to target to logs
6	Field mapping	Mapping table, coalesce on email, reference lookups
7	Scripts	onBefore validation, status conversion, logging
8	Results	Insert, update, ignore counts; no duplicates
9	Lessons and future scope	What was learned, next steps
10	Q and A	Questions

3. Live Demo Script

Time	Action	What to say
0:00	Show users_valid.xlsx	This is the source file with 10 users.
1:30	Load Data: create table, attach file, Submit	The data goes to a staging table, not the live table.
3:00	Open Transform Map and Field Maps	Each source field is mapped; email is the coalesce key.
4:30	Show onBefore and status scripts	Scripts clean data and skip incomplete rows.
5:30	Run Transform	The map writes the staged rows to sys_user.
6:30	Open Transform History	10 inserted, no errors.
7:30	Load the same file again and transform	Now 10 updated, 0 inserted: no duplicates.

Time	Action	What to say
8:30	Load users_invalid.xlsx and transform	Bad rows are ignored and logged.
9:30	Open Import Log	Each ignored row has a reason.

4. Likely Questions and Answers

Question	Suggested answer
Why not load directly into sys_user?	Staging protects live data and allows mapping and validation first.
Why email as coalesce?	It is unique and stable for each user.
What if the layout changes?	Update the data source and field maps; the rest stays the same.
How is quality ensured?	Validation script, reference lookups, and review of Transform History.
What would you add next?	Scheduled imports and web service imports.

5. Demo Checklist

- Instance awake and logged in.
- All four test files available.
- Reference departments exist.
- Screenshots ready as backup if the instance is slow.
- Records from earlier test runs removed or noted.
