

Test Plan

Project Planning Phase | Import Data Using Transform Maps

1. Test Objectives

- Confirm every requirement is met by the import solution.
- Confirm data in the target table matches the source.
- Confirm no duplicates are created on re-load.
- Confirm errors are logged and do not stop the import.

2. Test Scope and Levels

Level	Focus	Done by
Unit test	Single field map or script	Developer
Functional test	End-to-end import with sample files	Tester
Data validation	Compare source file and target records	Tester / data owner
Negative test	Invalid, missing and duplicate data	Tester
Security test	Role access to import features	Tester
Acceptance	Final check against requirements	Reviewer

3. Test Data

File	Content	Purpose
users_valid.xlsx	10 valid users	Happy path
users_duplicate.xlsx	Same users as valid file	Coalesce / duplicate test
users_invalid.xlsx	Missing email, unknown department, bad status	Negative tests
users_large.csv	5,000 rows	Performance

4. Test Cases

ID	Test case	Expected result	Req.
TC-01	Load users_valid.xlsx and run transform	10 inserted	FR-02, FR-03
TC-02	Compare target values with source	All values match	NFR-01
TC-03	Load users_duplicate.xlsx	0 inserted, 10 updated	FR-06
TC-04	Row with blank email	Row ignored and logged	FR-09
TC-05	Unknown department	Saved with blank department; warning logged	FR-08
TC-06	Status Active / Inactive	active = true / false	FR-07

ID	Test case	Expected result	Req.
TC-07	Auto map matching fields	Matching fields mapped	FR-05
TC-08	View transform history	Counts shown correctly	FR-11
TC-09	View import log for rejected rows	Reason shown for each	FR-12
TC-10	Load users_large.csv	Completes without timeout	NFR-03
TC-11	Run import without role	Access denied	NFR-04
TC-12	Reuse map for second file, same layout	Loads without changes	FR-13

5. Entry and Exit Criteria

Entry criteria	Exit criteria
Transform Map built and active	All test cases executed
Test data prepared	No open critical or high defects
Test instance available	Results documented and reviewed

6. Defect Management

Severity	Definition	Fix target
Critical	Wrong data in target or duplicates	Immediate
High	Valid rows rejected	1 day
Medium	Wrong log message or warning	2 days
Low	Cosmetic or documentation	Before final review
