

Customer Journey Map

Requirement Analysis | Import Data Using Transform Maps

1. Purpose

This journey map follows an administrator through the process of importing external data into ServiceNow with Import Sets and Transform Maps. It shows what the user does, thinks and feels at each stage, where the pain points are, and what the solution must do to remove them.

2. Persona

Priya, ServiceNow Administrator. Receives data files from HR and IT every month and is responsible for loading them correctly into ServiceNow tables.

3. Journey Stages

Stage	User actions	Thoughts / feelings	Pain points	Opportunity
Receive data	Gets CSV/Excel file from data owner	Unsure if the file is clean	Headers and formats differ each time	Provide a fixed file template
Prepare file	Checks columns, removes blanks	Worried about missing values	Manual cleanup takes time	Validate in transform scripts
Create data source	Uploads file, sets sheet and header row	Hopes settings are right	Not sure which options to choose	Clear setup steps
Load import set	Submits to staging table	Curious if all rows loaded	Row count mismatch is hard to spot	Check staging row count
Map fields	Creates Transform Map, maps columns to fields	Confused by many fields	Wrong mapping causes bad data	Auto map plus mapping sheet
Set coalesce	Marks unique field	Afraid of creating duplicates	Unclear which field is unique	Use email / serial number
Run transform	Runs the map	Nervous about production data	Cannot undo a bad load easily	Test with small file first
Review results	Opens transform history and target table	Relieved or frustrated	Errors are hard to trace	Read logs and fix source
Repeat next cycle	Reuses data source and map	Wants it to be quick	Starting from scratch each time	Reusable map

4. Emotional Curve

Stage	Emotion	Level
Receive data	Uncertain	Low
Prepare file	Worried	Low

Stage	Emotion	Level
Create data source	Hopeful	Medium
Map fields	Confused	Low
Set coalesce	Cautious	Medium
Run transform	Anxious	Low
Review results	Confident (when clean)	High
Repeat next cycle	Satisfied	High

5. Key Takeaways

- The mapping and coalesce stages cause the most worry and need clear guidance.
- Trust grows after the first clean run, so testing with a small file is essential.
- Reusing the same map removes most effort in later cycles.
