

Functional Requirements

Requirement Analysis | Import Data Using Transform Maps

1. Introduction

This document lists what the import solution must do. Each requirement has an ID, priority (MoSCoW) and acceptance criteria so it can be tested in a later phase.

2. Functional Requirements

ID	Requirement	Priority	Acceptance criteria
FR-01	Create a data source for a CSV or Excel file	Must	Data source saved with file type, sheet and header row
FR-02	Load file rows into an import set staging table	Must	Staging row count equals file row count
FR-03	Create a Transform Map from staging table to target table	Must	Map is active and linked to correct tables
FR-04	Map source fields to target fields directly	Must	Mapped values appear unchanged in target
FR-05	Auto map fields with matching names	Should	Matching fields are mapped automatically
FR-06	Use coalesce on a unique field	Must	Re-loading same file updates records, no duplicates
FR-07	Apply field map scripts to convert values	Should	Source 'Active' becomes true in the active field
FR-08	Map reference fields (department, manager, location)	Must	Reference fields point to correct existing records
FR-09	Skip invalid rows using onBefore script	Should	Rows with missing required values are ignored and logged
FR-10	Create missing choice values with choice action	Could	New choice values created when enabled
FR-11	Run transform and see inserted, updated, ignored, error counts	Must	Counts shown in transform history
FR-12	View import log and rejected row messages	Must	Each rejected row shows a reason
FR-13	Reuse data source and map for later files	Should	Second file with same layout loads without changes
FR-14	Schedule recurring import	Could	Scheduled import runs at set time

3. Business Rules

- A unique coalesce field must be defined before any transform on existing data.
- Required target fields must have a value, or the row is skipped.

- Reference values must already exist in the referenced table.
- Imports are tested in a non-production instance before production.

4. Requirement Traceability to Ideation

Problem from ideation	Requirements addressing it
Duplicate records	FR-06, FR-13
Wrong field values	FR-04, FR-07, FR-08
No audit trail	FR-11, FR-12
Repeated manual effort	FR-05, FR-13, FR-14
